

**QA Solve any three from following questions.** (Bold no. in bracket indicates position of  $n=0^{\text{th}}$  sample)

Q1) Prove the following properties of Fourier transform

(i) Linearity (ii) Frequency shifting (iii) Time shifting (iv) Time reversal

Q2) If the i/p sequence  $x(n) = 1/3$  ; for  $-1 \leq n \leq 1$   
 $= 0$  otherwise is applied to a system whose unit sample response is  $h(n) = a^n u(n)$  compute magnitude and phase spectrum of output.

Q3) Find DFT of  $x(n) = \{1, 1, 1, 1\}$  by matrix method. Also draw its magnitude and phase spectrum.

Q4) If  $x(n) = \{\dots, 0, 1, -1, 0, \dots\}$  find Fourier transform and sketch its magnitude and phase spectrum.

$\cos \omega - 1$   
 $2 \sin \omega \sin \omega/2$

$2 \sin \omega \cos \omega/2 + 2 \cos \omega \sin \omega/2$   
 $2 \sin \omega \cos \omega/2 + 2 \cos \omega \sin \omega/2$   
 $2 \sin \omega \cos \omega/2 + 2 \cos \omega \sin \omega/2$

QA Solve the following questions. (Any Three)

1) If  $F.T.[x(t)] = X(j\omega)$  then, Prove (i) Differentiation in time frequency (ii) Differentiation in frequency (iii) Time integration (iv) convolution (v) Time Scaling .

2) Find the Fourier transform of the following and sketch magnitude and phase spectrum.

i)  $x(t) = \delta(t)$  ii)  $x(t) = e^{-at} u(t)$  iii)  $x(t) = \cos \omega_0 t$

3) If  $F.T.[x(n)] = X(\omega)$  then, Prove that (i)  $F.T.[\cos \omega_0 n \cdot x(n)] = \frac{1}{2}[X(\omega - \omega_0) + X(\omega + \omega_0)]$  ,

(ii)  $F.T.[x(n-k)] = e^{-j\omega k} X(\omega)$

4) If  $x(n) = \{1, 1, 0, 1\}$  find 4-point DFT by matrix method.
